## SUMMARY

Software engineering student with hands-on experience in backend development, mobile application development, and distributed systems. Proficient in full-stack development using Node.js, React Native, and Kotlin.

## TECHNICAL SKILLS

|                                    |                                                                               |
|------------------------------------|-------------------------------------------------------------------------------|
| <b>Programming Languages:</b>      | JavaScript, TypeScript, Kotlin, Python, C++, HTML, CSS                        |
| <b>Frameworks &amp; Libraries:</b> | Node.js, React Native, React.js, Next.js, Jetpack Compose, Express.js         |
| <b>Databases:</b>                  | PostgreSQL, MongoDB, Firebase, Supabase                                       |
| <b>Tools &amp; Platforms:</b>      | Git, GitHub, Docker, Linux, Postman, REST APIs, QGIS                          |
| <b>Core CS Concepts:</b>           | Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks |

## WORK EXPERIENCE

|                                                          |                                          |
|----------------------------------------------------------|------------------------------------------|
| <b>Android Developer, (Contract)</b><br>ISRAD Sports LLP | Jan 2026 – Feb 2026<br>Vadodara, Gujarat |
|----------------------------------------------------------|------------------------------------------|

- Developed a **React Native** mobile application for a pickleball club featuring real-time score tracking, player leaderboards, and GPU-accelerated court animations using **React Native Skia** and **Reanimated**.

|                                                                                |                                          |
|--------------------------------------------------------------------------------|------------------------------------------|
| <b>Backend and Android Developer Intern</b><br>Tinkering Hub, Parul University | Nov 2025 – Dec 2025<br>Vadodara, Gujarat |
|--------------------------------------------------------------------------------|------------------------------------------|

- Designed and implemented RESTful backend services for an AR/VR application handling optimized image streaming and an automated image-to-panorama processing pipeline.
- Evaluated **COLMAP** and **HLOC** computer vision libraries for high-precision visual localization, reducing dependency on GPS in indoor environments.
- Developed an Android AR navigation module using **ARCore**, **SceneView**, and **Kotlin**, enabling 3D route overlays anchored to real-world surfaces.

## PROJECTS

|                                              |                               |
|----------------------------------------------|-------------------------------|
| <b>CampusFind</b> — Campus Navigation System | ( <a href="#">Live Demo</a> ) |
|----------------------------------------------|-------------------------------|

- Built a full-stack navigation web app using **Next.js**, **MapLibre GL**, and **Supabase**; implemented weighted graph-based shortest-path routing using **Dijkstra's algorithm**.
- Integrated **OpenStreetMap** and **GeoJSON** for GPU-accelerated map rendering; added real-time AR directional guidance via device orientation sensors.
- Deployed as an offline-first **Progressive Web App (PWA)** with **ImageKit CDN** for optimized asset delivery.

**Medical Emergency Service App** — Android Application

- Engineered a **React Native** Android app providing real-time routing to nearby hospitals using **MapLibre**, **Valhalla** routing engine, and **Google Maps API**.
- Rendered and performed low-latency spatial queries on a dataset of **200,000+ hospitals** across India,

|                                                             |                               |
|-------------------------------------------------------------|-------------------------------|
| <b>NamasteSetu</b> — AI-Powered Medical Coding Microservice | ( <a href="#">Live Demo</a> ) |
|-------------------------------------------------------------|-------------------------------|

- Built a **Node.js** microservice with a **Retrieval-Augmented Generation (RAG)** pipeline and semantic search to map WHO traditional medicine records to **ICD-11** codes; exposed via **25+ RESTful API** endpoints.
- Implemented fuzzy search and vector embeddings over **40,000+ records** achieving **sub-100ms** query latency; containerized with **Docker** and **PostgreSQL**.

## ACHIEVEMENTS

- Smart India Hackathon (SIH) 2024** — University Finalist; ranked **3rd** in the second round and placed in the **top 45 out of 730** university teams in the national final round.

## EDUCATION

|                                                                     |                   |
|---------------------------------------------------------------------|-------------------|
| <b>Bachelor of Engineering, Computer Science</b> , Parul University | Expected May 2028 |
|---------------------------------------------------------------------|-------------------|
